Wangsong Yin

17851168067 | 2018303115@mail.nwpu.edu.cn

Education

NWPU-SE

- GPA：91.64/100
  GPA Rank：1/248（1st-5th semester 0.5%）
  CET-4：639 CET-6：575
- Computer core courses：Discrete Mathematics（98）、C++ Programming （97）、Object Oriented Programming and Design（97）、Computer Networks（97）、Principles of Computer Organization（94）、Software Project Organization and Management （93）、Algorithm Analysis and Design（90）、Database Systems（90）
- Mathematics core courses：Advanced Mathematics(Volume I)（98）、Advanced Mathematics(Volume II)（100）、Linear Algebra（90）、Computational Methods （97）、Probability Theory and Mathematical Statistics（92）、Complex Function and Integral Organization（98）

Honors & Awards

Scholarship

- 2018-2019 National Scholarship
- 2019-2020 National Scholarship
- 2018-2019 NWPU Outstanding students（First class scholarship）
- 2019-2020 NWPU Outstanding students（First class scholarship）

Subject competitions

- 2019 & 2020 China Robot Competition, Middle-Size-Group, Simulation Match champion
- The 21st National Robot and Artificial Intelligence Competition, champion
- The 11st Chinese Mathematics Competitions, the first prize
- The 13st National College Students' software innovation competition (swcontest), the third prize（ranking 14/286）

Projects

- I am a member of the software group of the soccer robot base of NWPU (one of the innovation and practice bases of NWPU), and mainly responsible for robot strategy. I wrote the upper computer software system of team wheeled soccer robot using c++, studied and completed the robot obstacle avoidance algorithm based on sub target points. I also have a certain understanding of reinforcement learning.
- I participated in a National College Student Innovation and Entrepreneurship Project -- *robot strategy optimization based on sarsa and cerebellar model*. In this project, sarsa reinforcement learning is used to optimize the interception action of robot, in which I am responsible for the model establishment and implementation.
- I participated in the 13th National College Students' software innovation competition, responsible for the front-end quick-app and back-end spring boot code writing. The work "intelligent academic paper writing guidance quick application" adopts the Bert model, and provides functions such as word or grammar error detection, colloquial tendency analysis, data statistics and comprehensive scoring for University beginners. The winning rate of the competition was 7%, and our final ranking was 14 / 286, winning the third prize.

Self Evaluation

I have a solid foundation in computer and mathematics, strong self-learning ability, willing to learn and think about new knowledge, like challenges. I have a strong interest in the field of computer, and hope to study related fields and make some achievements in the future.
